Introduction to Wiring and Testing in Domestic Installation

**MQA Accredited
Programme
&
HRDC Refundable**

We are pleased to announce an upcoming six-week training course specifically designed to enhance your proficiency in constructing, testing, and fault-finding within domestic electrical circuits. This program balances theoretical knowledge with hands-on practical experience to ensure you are confident in managing residential electrical systems.

Duration: 1.5 months (Part time)

Mode: 12 Sessions of 2 hrs

Day: Tuesday / Sunday

The training course is structured to provide comprehensive skills in planning and executing domestic wiring support systems. Participants will learn to inspect installations, master the use of specialized tools, and install lighting, power, and control circuits. Additionally, the curriculum covers essential testing procedures—including insulation resistance and polarity tests—as well as the maintenance of various wiring systems such as PVC, metal conduit, and armoured cables. You will also gain expertise in determining termination and earthing methods while prioritizing safety and instrument selection.
